

zappware

HASSELT - FEBRUARY 11, 2012

Zappware nv designs, develops, and integrates compelling and revenue-generating interactive television (iTV) services for operators. Zappware uniquely combines the highest levels of creativity with the latest technology and techniques into simple, intuitive solutions that reliably integrate with any content delivery mechanism.

An opportunity has now arisen for skilled **iDTV Professionals** to join our team.

This is a unique opportunity to be part of a motivated team, with a worthy reputation for delivering high-performance products. For the right person, this role offers huge scope for career development in a fast-moving and exciting industry.

JOB DESCRIPTION iDTV PROFESSIONAL (M/F)

As an iDTV Professional, you will be part of a project team that values your contribution to the continued success of the Zappware product offering. Due to your interest and/or expertise in a broad range of technologies, possibly supported by your track record showing hands-on experience in the delivery and support of state-of-the-art iDTV products to customers around the globe, we're confident you will find an exciting environment at Zappware.

Knowledge of technology applications for interactive digital TV, including Client side embedded software, Back-end/server side technologies, Handheld devices software development, Testing, etc... is definitely a plus. As well as awareness that our offerings are end-to-end solutions, and that above technology domains team up into our products. This is key to understanding the continued success of Zappware, as is the eagerness to learn, discover and be a pro-active team member.

An iDTV Professional must be able to bring forward motivation, skills and insight. To have a creative mind and a progressive attitude in an innovative environment. He or she should be quite assertive in order to consult with clients.

The position requires travel to client and team locations abroad.

One must engage and contribute to multidisciplinary teams across Zappware's product lines and teams of 3rd party stakeholders. The iDTV Professional must understand how design is incorporated into technology solutions supporting operational (iDTV) processes. Flexibility and a sense of humor are indispensable for this position, as well as a passion for interactive TV design and technology.

To be considered for the role of iDTV Professional, you must have a relevant degree, ideally in IT, software, science or engineering. Excellent written and oral knowledge of Dutch and English is indispensable.

Your focus will be on defining, implementing, testing and supporting software solutions for Zappware's iDTV products.

Zappware frequently engages into complex design and development activities as we are challenged to conceptualize next generation products. Zappware's capabilities as a global TV experience innovation firm offers customers a new level of insight for new product experiences, new market entry and consumer product recommendations.

If you are someone who wants to influence your own development by convincing us of the competencies you have. We have listed some key expertise below, but want to encourage you to point out in your resume how your skills will contribute to our success.

- For the “**Client side embedded software engineer**”: DVB (AV steaming, CAK), Linux embedded system development, C, C++, Java
- For the “**Back-end / server side software engineer**”: Java, JEE, EJB, JSP, Struts, Spring, Hibernate, Linux, Apache, Lighttpd, MySQL
- For the “**Handheld devices software engineer**”: iOS & Android software development (multiple versions)
- For the “**Testing engineer**”: DVB (high level), STB HW/MW, test strategy

Being employed in our brand new offices, we offer a compelling salary and benefit package, in adherence to your experience and contribution to our company.
